

THE STRIPED CHICKEN RESTAURANT & BAR

Creating a space where people can dine safely despite the risk of coronavirus infection will allow restaurants to maintain business. Offering design solutions that adhere to the restrictions in place while also being long-term, high-quality, and aesthetically pleasing is the goal of this restaurant. The design will address space planning directly as means to increase the distance between patrons and staff, thus minimizing their risk of infection. It will also address HVAC issues and operational systems that affect how the virus is spread, thus helping to create a space that is safe for entertainment. Offering both bar space and carry-out options will further aid the restaurant in meeting customer and business needs. The goal in designing this restaurant is to meet coronavirus restrictions as well as offer an aesthetically pleasing and exciting environment for safe social gatherings.

SPACE PLANNING

What we know:

Confined spaces and poor air flow promote the spread of illness.

The spread of illness has a negative impact on hospitality.

Adaptations in design have been successful in decreasing illness.

What we can do:

Design adaptable seating options to enable social distancing.

Provide a variety of services, outside of only dine-in options.

Plan for the future by addressing these concerns early.
